

Duality SE

The new studio standard

Large-format analogue console with advanced DAW control

Duality SE. This is SSL.

Solid State Logic
S O U N D | | V I S I O N

The new studio **standard**

Welcome to the world of Duality SE, the large format analogue console designed for the modern studio environment.

Installed in some of the world's most prestigious studios, Duality SE allows producers and engineers to harness the clear sonic advantages of SSL SuperAnalogue™ processing within a console that features advanced DAW integration and control.

- **The analogue console for the modern studio**
Full analogue console with latest generation SuperAnalogue™ technology
- **Complete SSL analogue processing suite**
SuperAnalogue™ & VHD Mic Pres, E & G Series EQs, Dynamics and Master Bus Compressor
- **Unprecedented levels of constant visual feedback**
Full TFT metering for every channel bay
- **Integrated console processing within the DAW signal path**
Innovative SPLIT channel signal path architecture
- **Fully equipped for multichannel production**
Multiple Stereo buses and full 5.1 functionality
- **Ethernet connected multi layer control of all major workstations**
Controls two DAWs simultaneously
- **Channel switch automation**
Cue, FX, EQ, Cut and Insert switches can be automated

Featured installations

Germano Studios

New York

“Duality offers the quality sound of the flagship SSL analogue consoles combined with the on-console control of our Pro Tools® systems.”

Troy Germano

Grabaciones Silvestres

Sant Quirze Safaja

“For the most part it’s the analogue signal paths that do it for me, but it’s also great for the transport and DAW controls it offers. Ultimately Duality adapts perfectly to the way we work in terms of concept and design.”

Marc Parrot

Sheffield AV Studios

Phoenix, MD

“It is all very well thought out...a genius product in my estimation, in the way they’ve melded the analogue and DAW worlds. And the console sounds awesome.”

Drew Mazurek

Baltic Recording Studios

Bornholm

“What used to be time consuming ‘desk jobs’ are now handled with a few button pushes. We’ve had great results with making templates for different types of projects...now it’s just a question of loading a template and we’re ready to go.”

Jesper Mejlvang

Fenix Studios

Varnhem, Sweden

“In terms of our workflow, Duality has changed everything. We used to do everything inside the DAW, but now we have found the sonic superiority that’s possible using analogue EQ and compression.”

Lars Hallbäck

The Hit Factory Criteria

Miami

“The ability to use the Duality as a 48 channel analogue console one moment and a 32 channel DAW controller the next is a huge plus.”

Janice Germano

The Duality channel bay

Input

Duality features two independent Mic Pre-amplifiers on every channel, allowing you to choose from the unrivalled purity of SuperAnalogue™, or the creative possibilities of Variable Harmonic Drive (VHD)™. The VHD™ circuit introduces controlled 2nd or 3rd harmonic distortion to add warmth or grit. Line level signals can also be fed into the VHD™ circuit post recording for artistic experimentation. Both inputs offer 48V Phantom Power, Phase and Pad switches.

Dynamics

The classic SSL Dynamics Channel features three sections; the Compressor (switchable between traditional RMS and more modern Peak Sense modes), the Gate (with variable Hold time) and the Expander. There is also a Side Chain Listen feature for full creative control.

5.1 Panner

Offering the most comprehensive analogue surround panning ever seen, in addition to standard Left/Right pan, every console channel features separate controls for Front/Rear positioning, a dedicated LFE send and an LCR divergence control.

EQ

Duality offers a 4-band, twin-curve SuperAnalogue™ EQ design, switchable between E Series operation and G Series curves and control interaction. The HF and LF bands feature a Bell curve option to allow a fixed Q parametric response. Additional HF and LF filters complete the EQ section. Flexible routing options allow the channel processing elements to be re-ordered to a wide variety of configurations.

Solo + Cut and Fader

Control your traditional analogue channel level, your DAW's channel faders or both at the same time! Through SSL's unique approach, Duality offers unrivalled integration of today's DAWs within the analogue console paradigm. You can even control the analogue mixer and the DAW mixer simultaneously. Many DAW functions such as plug-ins can 'flipped' onto the faders for enhanced real-time control. Duality features high quality motorised faders with 'fader linking', Automation activation, and DAW function display. EQ, CUT and INSERT switches respond to station automation.

CUE & Sends

Each channel has a dedicated Stereo CUE send, and four mono FX sends. An innovative and flexible EFX feature reassigns control knobs away from their normal function and allows replication of small fader functionality with Channel Direct Output, Track Bus level control, and CHOP (channel output) sourcing for latency free monitoring and sends.

Mix Reassign Matrix

A powerful and extremely useful tool, allowing assignment of the CUEs (A+B) and Track Buses 1-24 to the main mix, which doubles up the number of inputs on Mixdown or Monitor Returns while recording. A unique Stereo Downmix panel allows complete control of the "fold down" of a multichannel 5.1 mix to Stereo, allowing the operator to seamlessly move between surround and a Stereo mix. Further 5.1 enhancement is provided by the inclusion of LFE filter frequency selection ideal for cross platform 5.1 work.

Channel TFT Screens

The amount of visual feedback provided by the console's large innovative TFT meter bridge screens is unsurpassed. Featuring Level display (for both console and DAW channels), Track Bus Routing assignment, Channel Processing order, Mix Bus assignment, DAW Channel Status indicator (REC READY, SELECT, EDIT), and Dynamics metering (for both Gain reduction and Gate). A new innovation, SSL's unique Eyeconix system allows operators to place images of their choice onto the meter bridge, aiding track recognition and enhancing workflow.

Centre Section and Routing

Duality SE features a comprehensive and elegantly organised mix environment control section that enables the operator to set up and manipulate routing, monitoring and transport from a single location.

Centre Section

The fully-featured centre section includes:

- Trackball, Group + Master Faders, DAW Transport & Numeric Location panel
- Comprehensive monitoring section with external feeds and full monitor speaker calibration options, Oscillator and Noise Generator
- Talkback Mic and associated communications switches
- Main Output Bus functions (eg. Inserts, Summing, Mix Bus reassign etc.)
- Four dedicated Stereo returns
- Classic SSL Main Bus Compressor (both Stereo & 5.1)
- Master controls for Track, Foldback and CUE/ FX buses
- Centre section TFT Metering
- Dedicated VU meters and moving coil phase meter
- DAW control TFT displays shows DAW status and plug-in parameters
- Four encoders and five buttons assignable to DAW functions
- Plug-in parameter control can be 'flipped' to faders

Routing Tile

The central Routing Tile provides centralised control of channel routing, signal processing order, and other facilities for a selected channel or across multiple channels. Selections can be a contiguous range or a selection of individual channels whose states can be controlled together. The Routing Tile provides a speed and comfort of operation not previously seen on an analogue console and allows the operator to stay in the central monitoring 'sweet spot' while having full access to channels positioned away from their reach.
